### ABSTRACT -----

KIM, INN

This study suggests a policy oriented idea in locational development strategies in Seoul and its metropolitan region to meet the current trends of globalization. In order to enforce the function of Yoeng Jong Do airport which is being constructed as a global hub and Seoul as a global city, it is suggested that both sites be considered as one integrating unit area instead of two separated ones.

For this, it is necessary to develop a world oriented corridor region connecting these areas. A set of five strategic locations are selected within the designated corridor region and specific developmental ideas are discussed for each location in the context of geographical association among themselves. They are as follows : 1) to enforce the new construction airport site not only as a global hub but also as a functionally specialized airport ; 2) to build a professional convention center at the site of Seoul Metropolitan Government Office ; 3) to establish a new internationally oriented business district and settlement at the entrance of Kimpo Airport Magok Sangam areas as a specified international section in Seoul ; 4) to enforce secondary industrial economic base in Seoul by expanding apartment type manufacturing firms in downtown Seoul ; and 5) to develop a new planned industrial zone along the airport expressway connecting the new airport and Kimpo Airport.
